AI Governance Framework Series

A Quick Guide for New Readers

Version 1.0

Welcome

Thank you for your interest in the **AI Governance Framework Series**.

This series has been developed to support responsible artificial intelligence governance in higher education assessment. Rather than providing a single policy or checklist, the series presents seven complementary frameworks that together offer a coherent approach to assessment design, academic integrity, transparency, professional judgement, and institutional implementation.

The frameworks are designed to be used individually or as an integrated series, depending on institutional needs.

Where Should I Start?

The best starting point depends on your role.

If you are...	Start with...
Lecturer	Framework 5 – Assessment Authenticity Checklist
Assessment Designer	Framework 5 – Assessment Authenticity Checklist
Programme Leader	Framework 2 – AI-Integrated Assessment Integrity Lifecycle
Academic Integrity Professional	Framework 6 – AI Risk-Level Matrix
Quality Assurance Staff	Framework 7 – Institutional AI Governance Guide
Educational Developer	Framework 2 – AI-Integrated Assessment Integrity Lifecycle
Researcher	Framework 1 – From Assistance to Authorship
Institutional Leader	Framework 7 – Institutional AI Governance Guide

Recommended Reading Order

For readers wishing to understand the complete framework series, the following sequence is recommended:

1. **From Assistance to Authorship**
Conceptual foundation for evaluating AI-assisted academic work.
2. **AI-Integrated Assessment Integrity Lifecycle**
Embeds responsible AI governance throughout the assessment process.
3. **AI Disclosure Framework**
Supports transparent disclosure of AI assistance.
4. **Oral Verification Toolkit**
Provides guidance for educational verification of intellectual ownership.
5. **Assessment Authenticity Checklist**
Supports the design of authentic, AI-resilient assessments.
6. **AI Risk-Level Matrix**
Guides professional judgement regarding the educational significance of AI use.
7. **Institutional AI Governance Guide**
Integrates the companion frameworks into a coherent institutional implementation model.

Although the frameworks build upon one another, each document has been written to function independently and may be adopted according to local institutional priorities.

How the Frameworks Relate

The framework series progresses from conceptual foundations to institutional implementation.

- **Framework 1** establishes the theoretical principles.
- **Framework 2** embeds those principles throughout the assessment lifecycle.
- **Frameworks 3–6** provide practical tools for implementation.
- **Framework 7** integrates the complete framework suite into institutional governance.

Readers may therefore approach the series either sequentially or by selecting the framework most relevant to their professional role.

Framework Status

The AI Governance Framework Series is **conceptual and practice-informed**.

The frameworks are intended to support educational practice, institutional implementation, scholarly discussion, and future empirical research.

They should not be interpreted as institutional policy unless formally adopted by the relevant institution.
