

Rubric Extract — Communication-Focused Criteria (Anonymised)

This document provides an anonymised extract of selected assessment criteria from an oral presentation rubric. The extract demonstrates how assessment design prioritised clarity, audience awareness, and communicative effectiveness over technical depth.

Assessment Focus

The rubric was designed to evaluate students' ability to communicate technical issues clearly to non-technical audiences. Criteria foreground explanation quality, organisation, and accessibility rather than subject-specific expertise.

Rubric Extract (Selected Criteria)

Clarity of explanation

- Explains ideas clearly using accessible, non-technical language.
- Key points are easy to understand for a general audience.

Organisation and coherence

- Presentation follows a clear and logical structure.
- Ideas progress smoothly and are easy to follow.

Audience awareness

- Content, tone, and examples are adapted to the needs of a non-technical audience.
- Avoids unnecessary jargon or explains terms when required.

Use of examples and support

- Examples are relevant and help clarify complex ideas.
- Supporting details enhance understanding rather than technical depth.

Design Rationale

Assessment criteria were intentionally designed to prioritise clarity, audience awareness, and communicative effectiveness rather than technical depth. This approach supports transferable communication skills and enables transparent, consistent assessment of students' ability to explain technical concepts to non-specialist audiences.
