

Anonymised Assessment Design Evidence — Technical Communication Presentation

Context:

This document provides anonymised extracts demonstrating assessment design, criteria alignment, and communication-focused evaluation for a technical English oral presentation task.

Role:

Course committee member and assessment designer.

Assessment Brief Extract (Anonymised)

Students are required to deliver an oral presentation explaining a technical issue to a non-technical audience. The task focuses on clarity of explanation, relevance to everyday contexts, and audience awareness. Students must explain why the issue matters, outline current risks or trends, and provide practical, accessible recommendations.

This task was designed to assess clarity, audience awareness, and communicative effectiveness rather than technical expertise.

Rubric Extract (Communication-Focused Criteria)

- Clarity of explanation
- Logical organisation of ideas
- Audience awareness and accessibility
- Effectiveness of examples and explanations

Assessment criteria were designed to prioritise clarity, audience awareness, and communicative effectiveness rather than technical depth.

Student Guidance Extract (Anonymised)

- Explain technical ideas using everyday language
- Avoid unnecessary jargon
- Structure the presentation clearly
- Focus on why the issue matters to the audience
- Provide practical, realistic recommendations

Design Rationale

This evidence demonstrates intentional alignment between task purpose, assessment criteria, and learner guidance. The assessment design foregrounds transferable communication skills and enables transparent, consistent evaluation of technical communication for non-specialist audiences.
